Merge pull request #1 from Devlinti/Login-Screen [...]

Deployment:
For now, deployment is a local deployment only. Download all folders and files from github and in a terminal cd into the nodeJS folder. In order to deploy the website, one must first download nodejs, npm, and all packages in the package.json file in the NodeJS folder using npm. First use the command: sudo apt-get install -y nodejs. Confirm the install was successful by typing node -v into the terminal. Next, type: sudo npm install npm --global to download np. Finally, use the command: npm install "enter package name here" -save for all packages listed in package.json. Now, while still in the NodeJS directory, type the command: node server.js and the website should open in your default browser on port 4000.
